SYSTEMS AND CLOUD ADMINISTRATOR

Systems and Cloud Administrator with 15+ years of experience stabilizing and scaling enterprise IT environments. Hands-on with PowerShell, Active Directory remediation, endpoint management, and Azure administration to improve operational stability, security, and cost control.

SKILLS

Infrastructure & Systems: Windows Server, Active Directory, Exchange Server (2019 / Subscription Edition), Microsoft 365, Intune, MECM / SCCM

Cloud Platforms: Azure, AWS, Hybrid cloud architecture, Azure CAF / WAF principles

Automation: PowerShell, Terraform

Operations: ITIL, ServiceNow, Patch Management, Vulnerability Remediation, Log Analysis, RCA

EXPERIENCE

MDR Technology Solutions (Oak Valley Health) | Toronto, ON

August 2025 – January 2026

Senior Systems Administrator

- Led Exchange Server 2019 to Subscription Edition migration across a DAG environment, ensuring high availability and production continuity
- Delivered MECM deployment for 2,700+ endpoints, strengthening device governance and patch compliance
- Remediated Active Directory and Group Policy across 40 OUs and 200+ GPOs, reducing policy drift and strengthening security posture
- Built PowerShell automation for OU cloning, GPO export/import, and configuration validation to reduce repetitive manual tasks

Dentsu Canada Inc. | Toronto, ON

January 2011 – July 2025

Cloud Administrator

- Optimized Azure environment using governance and cost-control frameworks, reducing spend by 60% while maintaining service availability
- Hardened security posture by migrating legacy workloads to Azure, reducing vulnerability exposure by 71%
- Served as a senior escalation point for infrastructure and cloud incidents across enterprise production services, driving timely resolution of high-impact issues and reducing risk to regional business operations
- Coordinated infrastructure change planning and release execution across services and projects, reducing implementation risk and minimizing disruption to users and business operations

System Support Engineer

- Led a team of five support specialists, driving ticket resolution performance 24% above the regional average through operational oversight
- Reduced average ticket resolution time by 57% by leveraging ServiceNow metrics to refine workflows, improve triage, and address process bottlenecks
- Owned day-to-day support for identity, server, and business-critical application services supporting 1,000+ users across Canada, ensuring service continuity and timely resolution of production issues

System Support Specialist II/Specialist

- Provided administration and incident support for Active Directory, Exchange, and SCCM, helping maintain productivity and endpoint service continuity
- Reduced SLA breaches by 50% while supporting 800+ users, improving responsiveness and compliance
